Frigi-Tech Lubrication Enhancement system

Frigi-Tech is designed for use in refrigeration, air conditioning, chillers, heat pumps, ammonia cold storage compressor systems and is compatible with any hermetically or semi-hermetically sealed system regardless of tonnage size.

Frigi -Tech will provide new life to bearings, seals, including all compressor parts, increase cooling capacity, quiet compressor noise, and **saves electricity!**

Frigi -Tech is compatible with both new and old refrigerants.

Frigi -Tech has tremendous results with Ammonia systems.

Frigi -Tech special blends are available for applications where synthetic oils are used.

Frigi -Tech restores the heat exchange and reduces friction, therefore improves the compressors mechanical efficiency and lowers power consumption.

Frigi -Tech contains an ingredient that remains in the refrigerant oil and is triggered by temperature on an as-needed basis only. It also contains a metal-seeking ingredient that bonds to all the internal metal surfaces providing a substantial reduction of friction which assists in reducing amperage draw.

Frigi-Tech restores the heat exchange and any losses of efficiency by remedying the oil fouling that has occurred.

Specific Features

-  Oxidation and Corrosion Protection
-  One Time installation
-  Excellent Return On Investment
-  No equipment interruption

-  Saves KHW at Peak Demand Costs
-  Restores Heat Exchange
-  Reduces Energy Costs
-  Extends Equipment Life
